

LaserMAX Systems: High-resolution printing solutions for Macintosh II, IIfx, IIfx, IIfx and IIfx users.

High-Quality Resolution ▶

TurboRes™, LaserMAX's powerful resolution enhancement technology, provides plain-paper print quality unlike anything you've ever seen before. TurboRes™ controls position and height of individual pixels on the printed page and eliminates rough, stair-step edges between pixels.

Type 1 Format Typefaces ▶

LaserMAX provides a collection of 135 Type 1 format typefaces with the LaserMAX 1200, the LaserMAX 1000kx and the LaserMAX 1000. LaserMAX also provides a 50-typeface collection with the LaserMAX 400. And LaserMAX printers allow you to continue to use Type 1 fonts from other type foundries, such as Adobe, Bitstream, Monotype, Linotype, and Digital Typeface Corporation.

100-Percent PostScript ▶

All LaserMAX printers are PostScript-language compatible. Three new LaserMAX products incorporate Truetype™ PostScript software from Microsoft—the LaserMAX 1200, LaserMAX 1000kx and the LaserMAX 400. Truetype provides compatibility with both Adobe's PostScript language and the Type 1 font format, as well as the TrueType format in Apple's upcoming System 7.

AppleTalk Network Compatible ▶

LaserMAX printers are fully compatible with AppleTalk™ network systems. With any Macintosh II on the network, even Macintosh Classic, Plus, SE and SE30 users can print to a LaserMAX personal typesetter and benefit from LaserMAX's high-quality resolution and typeface diversity.

LaserMAX 1200 Personal Typesetter II

With the introduction of the new LaserMAX 1200 Personal Typesetter II, LaserMAX gives you far more publishing power than ever: 1200 x 1200 TurboRes™ output in an 11 x 17-inch format. By combining a larger print area and high-resolution output, you can take full advantage of your software applications for the first time. Create two-page spreads, tabloid-size newsletters, posters and more.

LaserMAX 1000kx Personal Typesetter

If speed is important to you, you'll want the LaserMAX 1000kx Personal Typesetter—it prints up to five times faster than the Apple LaserWriter IINT. You also get 1000 x 1000 TurboRes™ output on plain paper from the LaserMAX 1000kx Personal Typesetter.

LaserMAX 1000 Personal Typesetter

Imagine, 1000 x 1000 TurboRes™ output on plain paper from a desktop printer. Resolution this fine allows you to print camera-ready output directly from your desktop. Use the LaserMAX 1000 Personal Typesetter and get typeset-quality text and line art without the expense of traditional photo-typesetting.

LaserMAX 400 Personal Printer

Who said quality doesn't come cheap? The LaserMAX 400 Personal Printer provides Macintosh users with 400 x 400 TurboRes™ laser output, 50 premium typefaces in Type 1 format and still sells for less than \$2,000. That's a bargain anyway you look at it.

LaserMAX MX6 Printer Controller

Add an MX6 printer controller to your existing Apple LaserWriter, LaserWriter Plus, SC, NT or NTX and you'll witness a boost in your output resolution. Three models are available: the MX6/2 prints at 400 x 400 TurboRes™, while the MX6/4 and the MX6/6 both provide 800 x 800 TurboRes™ quality.
